

Ecosystem Services and Adaptation to Climate Change

Everyone Plays a Role

Raffaele Vignola*, Celia Martinez Alonso*, Bruno Locatelli**

Ecosystem services and adaptation to climate change

- Many people and economic sectors depend on ecosystem services, e.g., water regulation.
- Ecosystem services are threatened by land use changes and climate change.
- Considering ecosystem services is strategic for adaptation.

How to link ecosystem services and adaptation?

- Adaptation for ecosystem services: reducing the vulnerability of ecosystems to climate change.
- Ecosystem services for adaptation: conserving ecosystem services for reducing the vulnerability of society.

Key messages from Latin-American experts and stakeholders

Acknowledgments: the authors thank the 80 experts and stakeholders from 24 countries and 56 institutions who discussed these key messages during a workshop on ecosystem services and adaptation to climate change, held on November 3 to 5, 2008 in CATIE, Turrialba, Costa Rica.
