

**3<sup>rd</sup> International Group for Genetic Improvement  
of Cocoa (INGENIC) International Workshop on  
the New Technologies and Cocoa Breeding**

**16 - 17 October 2000  
Kota Kinabalu, Sabah, Malaysia**

— ABSTRACTS —

**Evaluation and use of the genetic diversity present in the International  
Cocoa Genebank ( ICG,T) in Trinidad.**

O. Sounigo<sup>2</sup>, Y. Christopher<sup>1</sup>, S. Ramdahir<sup>1</sup>, R. Umaharan<sup>1</sup>, A. Sankar<sup>1</sup>.

1 = Cocoa Research Unit University of the West Indies Saint-Augstine Trinidad and Tobago, 2  
= CIRAD-CP BP5035 34032 Montpellier France Attached to the Cocoa Research Unit.

The genetic diversity is currently assessed in the ICG,T , using Isozyme Electrophoresis and RAPD. The informations obtained from this assessment are used for developping a strategy to establish a "working collection". Proposals are made to integrate the results of this assessment into cocoa breeding strategies.
