Sorghum ID
Sorghum ID says BY FIVE THE FUTURE

Welcome to Montpellier!

On behalf of everyone who has contributed to the organization of the conference and the development of the scientific program, we want to welcome you to ***Sorghum in the 21st Century: Resiliency and Sustainability in the Face of Climate Change***. This conference and the scientific program build upon the groundwork established in Cape Town at the 2018 conference hosted by the University of Pretoria and the Feed the Future Innovation Lab for Collaborative Research on Sorghum and Millet. The primary objective of the 2023 conference continues to align with past goals: To build relationships between producers, consumers and the research and development community around the fascinating opportunities sorghum presents to address some of the world's greatest challenges facing agriculture. It is the primary purpose of this conference to advance this dialogue and update the community about the state of sorghum science, industry, development and novel opportunities to confront climate change. We must focus on creating additive knowledge and identifying the 'known unknowns' in order to build collaborative actions that break down geographical and scientific barriers and that increase resiliency and sustainability across the sorghum value chain.

We will address this need through exciting keynote, plenary and contributed presentations, a wide range of posters and exhibits, topical symposia, and student events such as the '3-Minute Thesis' competition that will identify the best and brightest minds that will move our work forward. Special scientific visits and tours, the addition of the 'Sorghum Idea Challenge' and social events in the most wonderful southern France style will further enhance out this experience. Our geographical focus on the European Union will be an eye-opening experience for all.

This event would not have been possible without generous funding from numerous sponsors from both the public and private sectors around the world. A special thank you is extended to Kansas State University as our lead event sponsor. This conference would not have been possible without the dedication and hard work of the local and international organizing committees over the past 24 months. Truly this has been a collaborative effort from like-minded individuals and organizations from around the world.

We hope you will leave the conference renewed and energized about the monumental and societal role of Sorghum in the 21st Century!

TABLE OF CONTENTS

PROGRAM

Planning at a glance	21
Monday 5 June	23
Tuesday 6 June	26
Wednesday 7 June	30
Thursday 8 June	35
Friday 9 June	38

ABSTRACTS MONDAY 5 JUNE

Plenary Sessions

■ Opening Plenary	40
■ Plenary 1	41

Parallel Sessions 1

■ A - Genetics and genomics of adaptation -1- Oral presentations	43
■ B - Agroecological intensification -1- Oral presentations	47
■ C - Physiology and Phenotyping tools to support breeding -1- Oral presentations	51
■ D - Developing new products for human consumption -1- Oral presentations	55

Parallel Sessions 2

■ A - Highlighting sorghum diversity as a key to develop sustainable production systems Oral presentations	59
■ C - Physiology and Phenotyping tools to support breeding -2 Oral presentations	63
■ D - Optimizing breeding programs to maximize genetic gains -1- Oral presentations	67

ABSTRACTS TUESDAY 6 JUNE

Plenary Session

■ Plenary 2	71
-------------------	-----------

Parallel Sessions 3

■ A - Genetics and genomics of adaptation -2- Oral presentations	74
■ B - Agronomy / Modelling / Prediction -1- Oral presentations	79
■ C - Optimizing variety development through farmers and value chain stakeholder involvements Oral presentations	84
■ D - Developing new products for human consumption -2- Oral presentations	89

Parallel Sessions 4

■ A - Developing genomic / Genetic resources and tools	
Oral presentations.....	94
■ B - Agroecological intensification -2-	
Oral presentations.....	99
■ C - Developing varieties to support forage market development -1-	
Oral presentations.....	102

Parallel Sessions 5

■ A - Genetics and genomics of adaptation -3-	
Oral presentations.....	105
■ B - Genetics and genomics of biotic constraints -1-	
Oral presentations.....	109
■ D - Optimizing breeding programs to maximize genetic gains -2-	
Oral presentations.....	113

ABSTRACTS WEDNESDAY 7 JUNE**Parallel Sessions 6**

■ A - Breeding Programs achievements and technology delivery	
Oral presentations.....	117
■ B - Seed System	
Oral presentations.....	122
■ C - Agronomy / Modelling / Prediction -2-	
Oral presentations.....	127
■ D - Genetics and genomics of grain quality -1-	
Oral presentations.....	132

Parallel Sessions 7

■ A - Genetics and genomics of adaptation -4-	
Oral presentations.....	137
■ B - Developing varieties to support forage market development -2-	
Oral presentations.....	141
■ C - Sorghum Branch - Organization / Multi-actor organization -1-	
Oral presentations.....	145
■ D - Genetics and genomics of grain quality -2-	
Oral presentations.....	149

Parallel Sessions 8

■ B - Genetics and Genomics of biotic constraints -2-	
Oral presentations.....	153
■ C - Sorghum Branch - Organization / Multi-actor organization -2-	
Oral presentations.....	156
■ D - Genetics and genomics of grain quality -3-	
Oral presentations.....	160

ABSTRACTS THURSDAY 8 JUNE**Plenary Session**

■ Plenary 4	165
-------------------	------------

Parallel Sessions 9

■ A - Genetics and genomics of adaptation -5- Oral presentations.....	167
■ B - Agroecological intensification -3- Oral presentations.....	171
■ C - Genetics and genomics of biotic constraints -3- Oral presentations.....	175
■ D - Developing new products for human consumption -3 Oral presentations.....	179

Parallel Sessions 10

■ A - Optimizing breeding programs to maximize genetic gains -3- Oral presentations.....	183
■ C - Genetics and genomics of biotic constraints -4- Oral presentations.....	186
■ D - Developing new products for human consumption -4- Oral presentations.....	189

ABSTRACTS OF POSTERS

• List of Posters.....	191
■ S1 - Capturing sorghum's genetic potential in responding to climatic and environmental challenges.....	198
■ S2 - Optimizing sorghum production techniques to minimize loss and maximize on-farm returns.....	278
■ S3 - Defining sorghum's role in regenerating soil health and enhancing the sustainability of global farming systems	302
■ S4 - Strengthening value chains, seed systems and trade opportunities to build a more resilient and profitable sorghum indust	308
■ S5 - Exploring new horizons in market development and high-value product creation.....	324
• Lists of Supporting partners, Exhibitors and Sponsors	359
• Exhibition plan & List of booths	361
• Hotel location	362

Plant response to a late heat stress can be modified by an earlier one: a case study on sorghum grain production

Angelique Berger (angelique.berger@cirad.fr)

Aga Institut, CIRAD, Montpellier, France

Climate change is now a reality and observable effects include higher temperatures with successive periods of heat waves. These events have consequences in plant development and grain production. Sorghum is an African native cereal known for its robustness. However, in the context of climate change, sorghum production can be affected by heat stresses during reproductive stage. Even if the effects of single heat stress were already described as having an impact on sorghum grain production, the effects of recurrent heat waves were not studied until now.

A preliminary study was performed in 2021 with two contrasted genotypes grown under four heat stress scenarios in controlled conditions, combining single and recurrent heat waves. The aim of this study was to analyze i.) the effects of these stresses on plant production ii.) the eventual impact of an early heat stress on a later one. In addition to yield components analyses, morphological, spectral and biochemical measurements were performed on sorghum panicles.

Yield components, morphological traits and grain quality were differently affected depending on the stress scenario. Furthermore, our results show that an early heat stress can attenuate or amplify the response of a later one, depending on the considered variable, the genotype but also the position of the first stress compared to the second one.

New experiments are currently investigated in RICOCHETS project (2023-2026). Our original approach combines dynamics multiscale analyses with samplings at key times (early stress/recovery periods/late stress). These results will contribute to broaden our knowledge on the response of plants to recurrent heat waves, which can be used in future plant breeding programs.
