

Ansés scientific and doctoral days

2 & 3 October 2023

Ansés – Maisons-Alfort

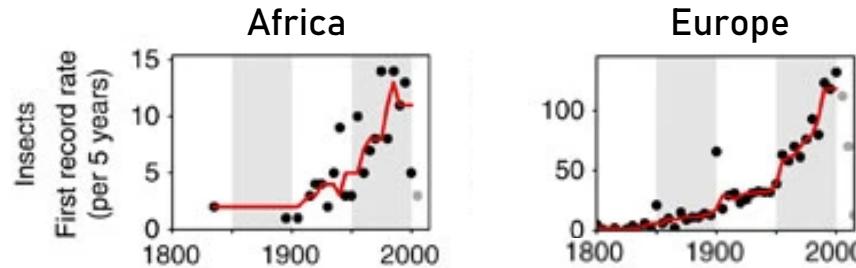

Agora Building of the National
Veterinary School of Alfort (EnvA)

Identifying the specific status and geographical origin of European incursions of an invasive and cryptic pest, *Bactrocera dorsalis* (Diptera: Tephritidae)

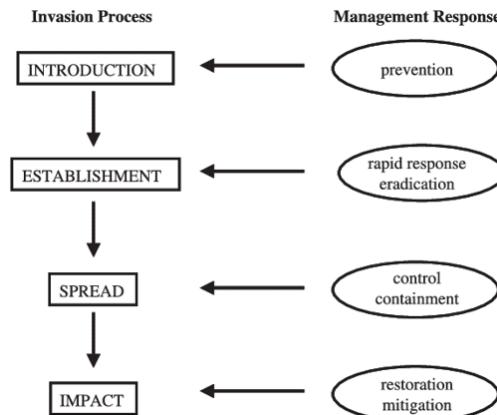

Charbonnel Emeline

**Anses – Plant Health Laboratory –
Entomology and Botany Unit –
Montpellier**

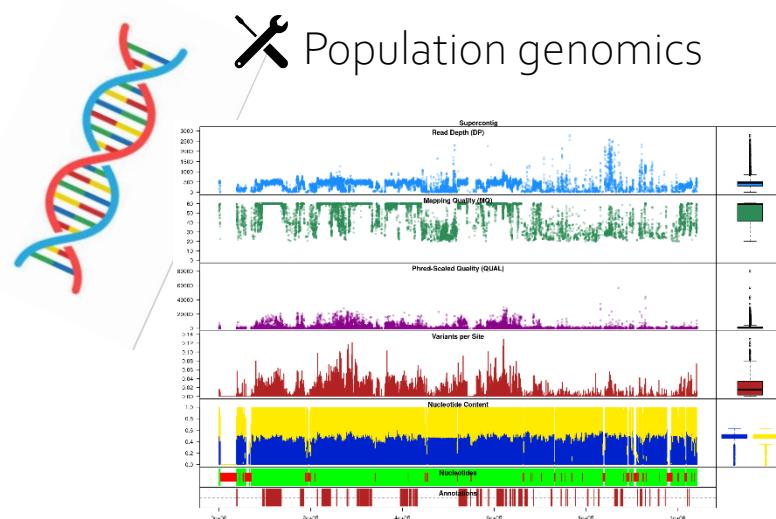

Biological invasions

Temporal trends in continental first record rates. *Seebens et al. 2017*

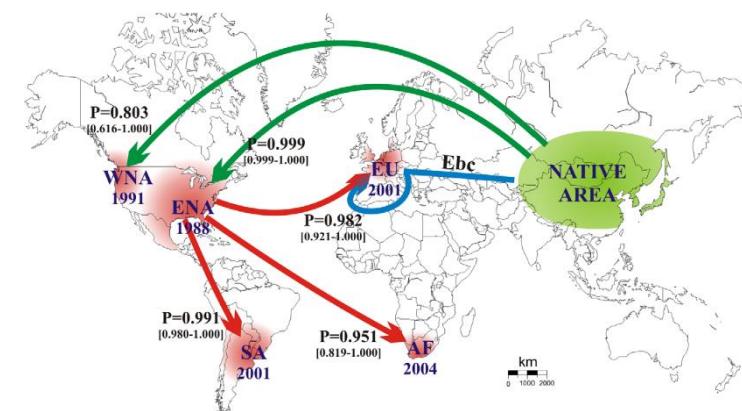

Stages and management of biological invasions

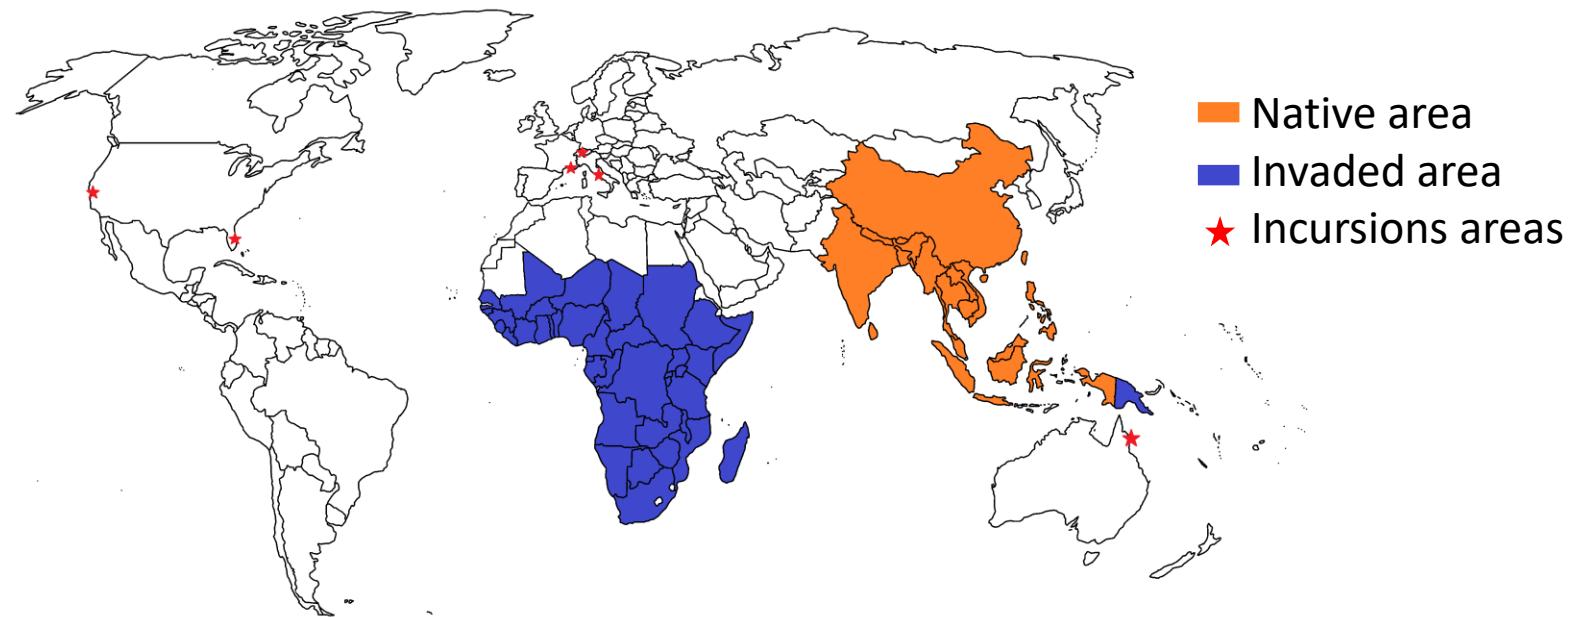

Population genomics

History of invasion

Bactrocera dorsalis – Oriental Fruit Fly

→ Priority among the Union quarantine pests

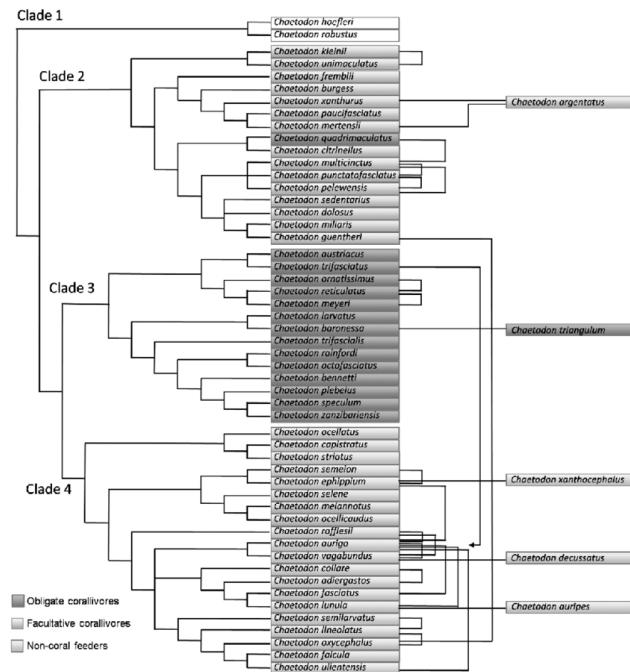

→ Origin of European incursions ?

The *Bactrocera dorsalis* complex

Morphological similarities

Hybridization

Methyl-eugenol lure

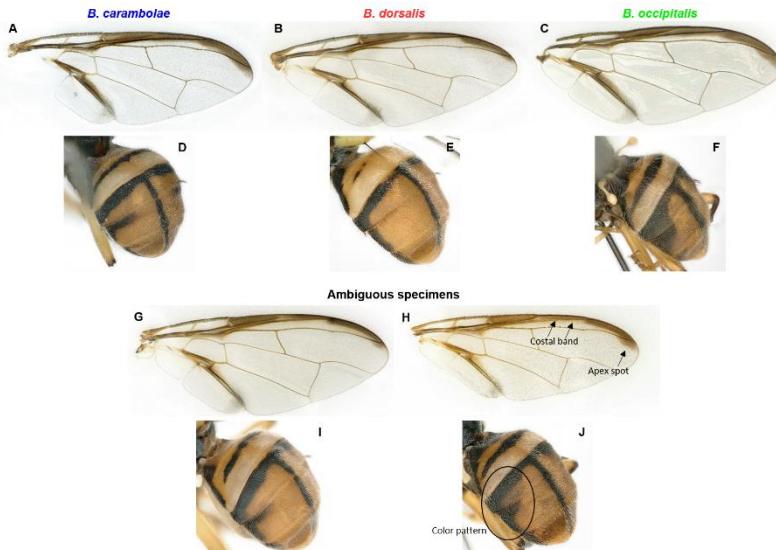

B. dorsalis identification protocol

+

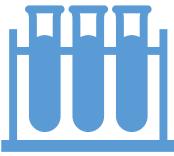

+

Evaluation of identification methods for cryptic *Bactrocera dorsalis* specimens: combining morphological and molecular techniques

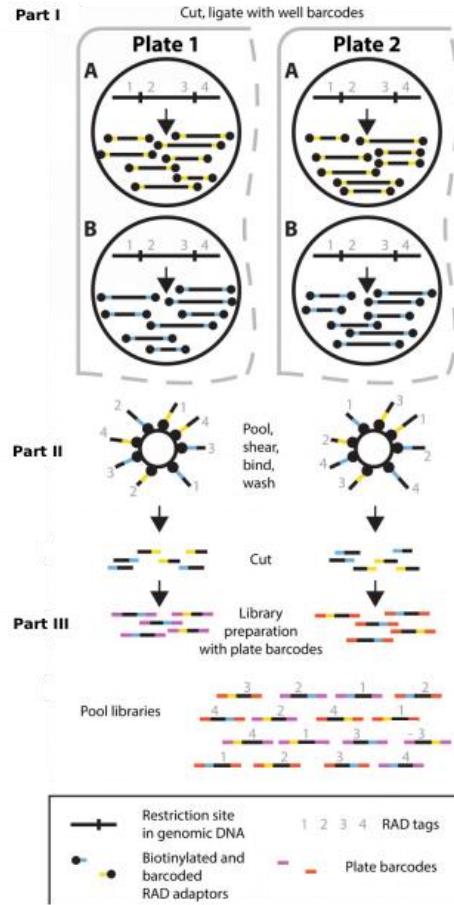

South East Asia _ *B. carambolae* & *B. dorsalis* & *B. occipitalis* confusions

Molecular protocol

Best-RAD (restriction-site associated DNA) protocol

molecular weight of 5-10kb

genotyping error < 0,05%

protocols.io

A FAIR protocol of the Best-RAD sequencing approach

ABSTRACT

→ Species delineation in the *B. dorsalis* complex

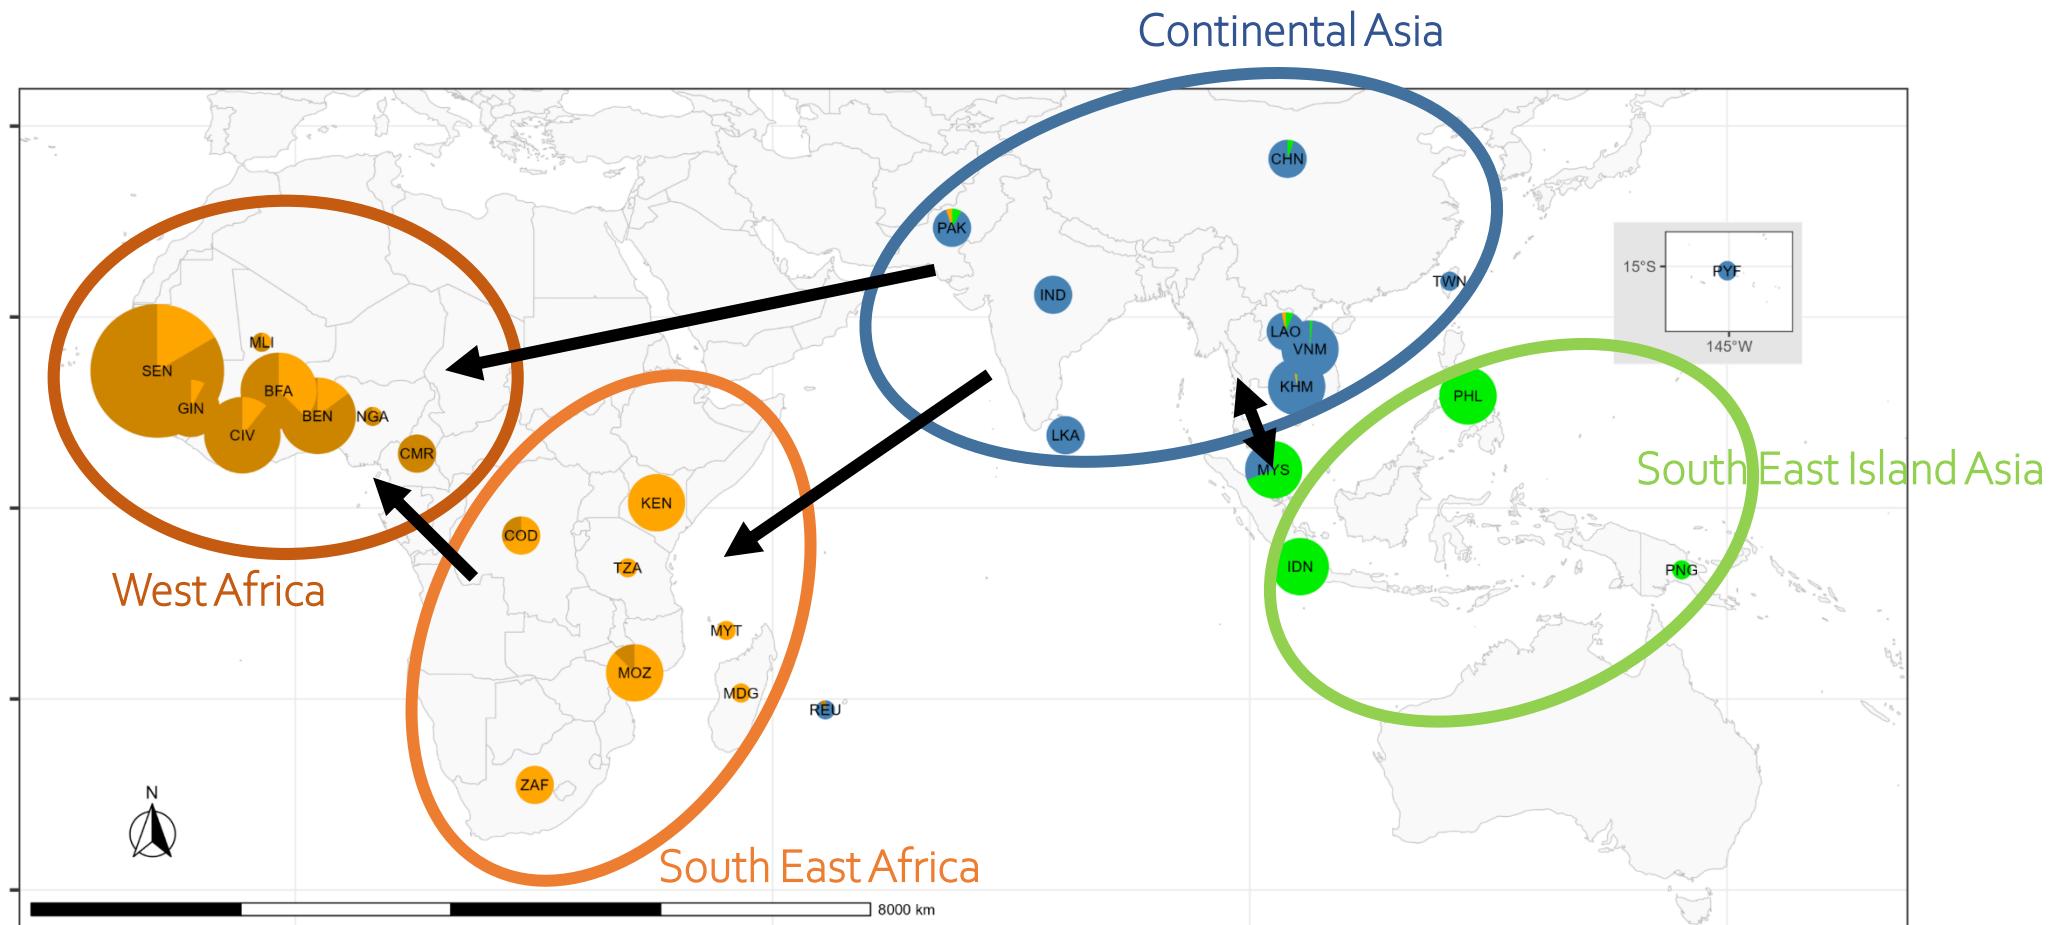

13 species _ 66 individuals in the *B. dorsalis* complex

- Identification of specimens within the complex
- No strong evidence of nuclear introgression

→ Phylogeography in *B. dorsalis*

84 worldwide *B. dorsalis* ss

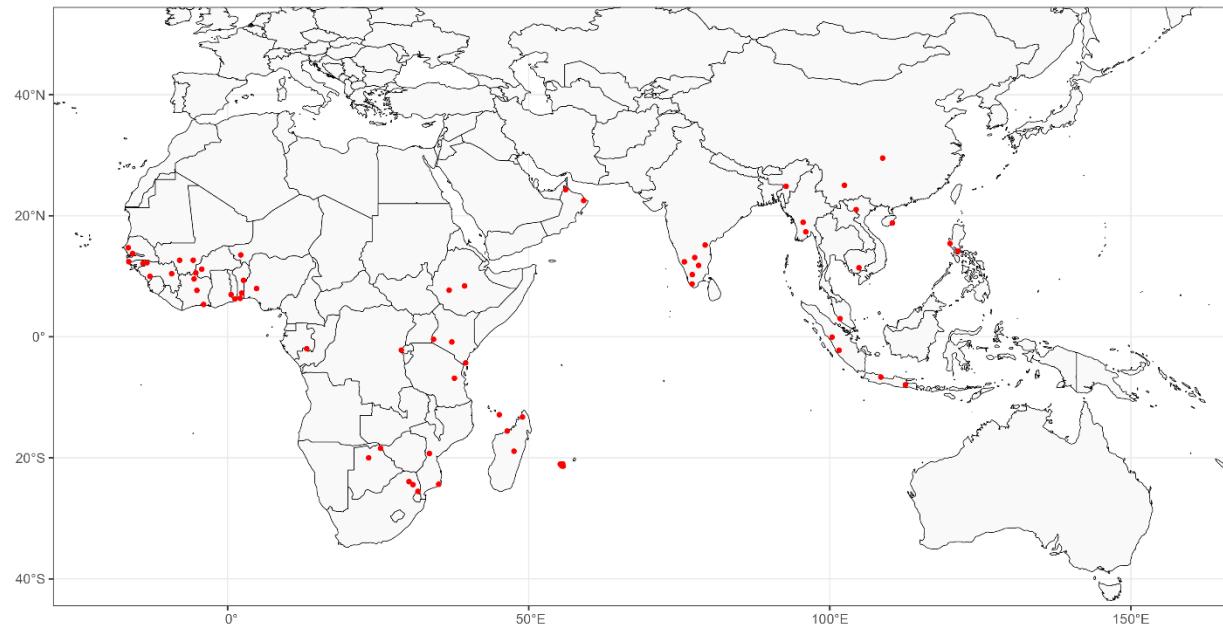

→ Refine genomic population structure + Inform geographical origin of incursions

19,678 nuclear probes to capture of specific loci of interest in *B. dorsalis*

70 *B. dorsalis* populations - 1950 individuals

+ 177 European incursions
