

# XXVII International Congress of Entomology

New Discoveries through Consilience

Abstract Book

Dates : August 25<sub>[sun]</sub> - 30<sub>[fri]</sub>, 2024

Venue : Kyoto, Japan

[ Kyoto International Conference Center ]

ICE 2024  
KYOTO

New Discoveries through Consilience

# XXVII International Congress of Entomology

Kyoto, Japan  
August 25<sub>[sun]</sub> - 30<sub>[fri]</sub>, 2024

## TABLE OF CONTENTS

### WELCOME MESSAGES

The Chair of the ICE Council .....	2
The President of Local Organizing Committee .....	3
The Vice President of Local Organizing Committee .....	4
The President of the Union of Japanese Societies for Insect Sciences .....	5
The Science Council of Japan (SCJ) .....	6

### MAP OF KYOTO INTERNATIONAL CONFERENCE CENTER .....

	7
--	---

### PROGRAM AT A GLANCE .....

	9
--	---

### GENERAL INFORMATION

Information Desk .....	10
Cancel Policy, Invoice and Receipt .....	10
Certificates of Presentation and Attendance ..	10
Code of Conduct .....	10
Exhibition .....	10
Childcare Services .....	10
Family - Friendly Space .....	11
Cloak Service .....	11
NIWA Café, Coffee Break and Lunch Box ...	11
Internet Access .....	11
Battery Desk .....	11
Lost and Found .....	11
Meditation Room/Prayer Room .....	11
Accessibility .....	11
Smoking Area .....	11
Social Media .....	11
Theme of the ICE2024 Kyoto: New Discoveries through Consilience .....	12
Mobile App .....	12

### FOR ORGANIZERS, SESSION CHAIRS AND SPEAKERS

For Organizers, Session Chairs .....	13
For Oral Speakers .....	13
For Poster Speakers .....	14

### PROGRAM INFORMATION

Plenary Lectures .....	15
Awards	
The Wigglesworth Memorial Lecture and Award Ceremony .....	17
The Filippo Silvestri Memorial Lecture and Award Ceremony .....	17
The 2024 Awards from the Council of the International Congress of Entomology (CICE) .....	18
Awards Ceremony for Certificate of Distinction and Certificate of Merit .....	18
Announcement of Presentation Awards and Voting Instructions .....	18
List of Scientific Section .....	19
List of Symposia .....	20
List of Poster Sessions .....	24
Women in Entomology (WIE) .....	25
WIE Luncheon Seminar .....	25
Women in Entomology Lecture (Open to Public) .....	25
Ennichi of WIE .....	26
Citizen Programs	
Citizen Program (Open to Public) .....	26
International Exchange Event for Japanese Elementary and Junior High School Students .....	26
Poster Presentation by Elementary, Junior High and Senior High School Students .....	26
International Entomological Society Leadership Meeting .....	27
Satellite Symposia .....	27

### SOCIAL ACTIVITIES AND MIXERS

Opening Ceremony .....	28
Welcome Mixer .....	28
Gala Dinner .....	28
Closing Ceremony .....	28
Farewell Mixer .....	28
Shodo (Japanese Calligraphy) .....	28
Origami (Japanese art of paper folding) .....	28

Art Competition for Elementary and Junior High School Students .....	28
Photo Competition .....	28
Exhibition Events involving Insects .....	28
Touching with Insects ! .....	28
Souvenir Shops of Artists in Japan .....	28
Meet the New World of Traditional Crafts in Kyoto .....	28
Demonstrations of Kyoto Traditional Crafts ...	29
Gacha-gacha .....	29

### Logos from the International Congresses of Entomology .....

	29
--	----

### TOURS

Excursions to Lake Biwa .....	30
Tour for Accompanying Person .....	30

### TIME TABLE .....

	31
--	----

### PROGRAM

Symposia	
Sunday 25 August .....	44
Monday 26 August .....	45
Tuesday 27 August .....	67
Wednesday 28 August .....	89
Thursday 29 August .....	98
Friday 30 August .....	120
Poster	
Monday 26 August .....	136
Tuesday 27 August .....	146
Wednesday 28 August .....	152
Thursday 29 August .....	160
Friday 30 August .....	167

### SPONSORS & EXHIBITORS .....

	2849
--	------

### ICE2024 ORGANIZING COMMITTEES

Local Organizing Committee .....	2850
Advisory Board Members .....	2850
Scientific Section Convenors .....	2851

### LIST OF AUTHORS .....

	2852
--	------

resistance. To address this issue, we developed a spatially-optimized sequential sampling plan using spatio-temporal thrips data collected during the 2021 and 2022 growing seasons to reduce the overall sampling time required to make control decisions, thereby increasing efficiency and grower adoption. The sampling plan was designed using Taylor's power law to determine thrip population aggregation patterns and Wald's sequential probability ratio test (SPRT) to determine the optimal decision by calculating the likelihood ratio between the null (spray) and alternative hypotheses (no spray), based on the observed data, at each step of the sampling process. The goal of the sampling plan was to reduce the number of samples needed to be taken to optimize insecticide applications required while still maintaining effective control of onion thrips populations. Our results demonstrate that the sequential sampling plan was effective in reducing the sampling effort required to estimate populations of onion thrips by up to 76% compared to the traditional fixed sampling approach. The greater level of surveillance of our plan also helped growers optimize insecticide applications without compromising control of onion thrips populations. The findings from this project have been incorporated into a digital application called 'Sampling by Cornell' where stakeholders are able to track and store the information gathered through sampling.

## [P0796] Hit the road of plant usages to consilience with Knomana

\*Pierre Martin<sup>1</sup>, Pierre Jean Silvie<sup>1,2</sup> (1. AIDA, Univ. Montpellier, CIRAD, Montpellier (France), 2. PHIM, IRD, Montpellier (France))

Adopting the One-Health approach means reconciling all domains of health (human, public, animal, plant, and environmental) while considering consilience. Applied to crop protection, in particular the substitution of a synthetic pesticide using a botanical product, e.g. an aqueous solution or an essential oil, the first challenge is to choose a plant species, a chemotype, or a mixture of plants whose effects on pest or disease have been scientifically demonstrated in the literature. The adopted botanical can range from a local wild plant to allochthonous cultivated plants. Another challenge is to ensure that this product is less harmful to human, animal, and environmental health than the pesticide. For example, despite the well-known beneficial effects of neem against many pests, it has a spermicidal effect, requiring precautions in its use. In addition, the impact on environmental health or an ecological service as the natural regulation of the pests by their natural enemies, is rarely considered. Therefore, the aim of our work is to help researchers and technicians to tackle these challenges.

The method adopted is based on the construction of a knowledge-based system named Knomana. This system includes a knowledge base, which brings together results presented in the scientific literature on the use of plant-based products for animal, plant, human, and environmental health. The base currently contains 48,000 use results covering 2,800 plant species to control 740 species of pests, including vectors. To navigate and explore this knowledge base, analysis tools, e.g. the RCAviz editor, have been developed based on Formal Context Analysis, a data mining method derived from artificial intelligence. While computer scientists, entomologists, microbiologists, and agronomists are currently carrying out construction of this system, its development need collaboration with pharmacists, veterinarians, epidemiologists, ecologists, etc. in order to fill the knowledge base, to cross disciplines and to combine knowledge on the plant usages resulting of a better choice of a plant for the different health.
